

TEXAS HOUSE WOMEN'S HEALTH CAUCUS

Identify and eliminate systemic and social issues of disproportionality and disparities in health and health care facing vulnerable communities in Texas, particularly Black Texans.

Expand access to and quality of women's health care services in "contraceptive deserts" and rural and medically-underserved areas of Texas.

Increase access to services related to domestic and sexual violence; improve and ensure widespread educational efforts to prevent domestic and sexual violence.

Protect and maintain Texans' ability to access all women's and reproductive health care services, and Texas medical providers' abilities to safely and confidently deliver those services, in our state.

Prevent unplanned births through widespread access to the full range of FDA-approved contraceptives, delivered under evidence-based best practices.

Foster an open environment for new improvements, treatments, and technologies that ensure the best health outcomes through women's health and other health care services.
